

Solution: Your Experienced Partner in Cross-Border Project Management

Cross-Border Project Management presents **unique challenges** stemming partly from the **company** itself and from national **cultural differences**. This is particularly true for projects involving Asia and Europe.

Project Management is first-of-all **leadership**, but will not be successful without professional communication, stakeholder-, as well as time-, cost- and specification management. **Project excellence** is grounded in a clear and transparent **methodology** and requires trained people, defined processes and sufficient resources. A project manager needs negotiation skills, is a critical thinker and a good team manager. He/she also needs a lot of commitment, energy, passion and enthusiasm to convey the strategic importance into the spirit of his/her cross-functional team! **Only a well-aligned team will achieve all project targets.**

CBS is your **competent partner** in **Cross-Border Project Management**. We have led and implemented numerous projects for our clients, one example being the set-up of the first green-field plant of a German automotive supplier in Japan. Each Solution Partner has run multiple, wide-scope projects in different industries (automotive, trading, renewable energy, medical and others). The industries are different, but the needed competence and methodology to run the projects successfully remain unchanged. Our project approach is in line with the international **IPMA standard**. The solution leader is an IPMA Level B Certified Senior Project Manager.

CBS can either be **part of the project organisation**, taking on the roles defined by the client and **supporting the projects directly** or we can conduct **training** for the project team before the start of the project. We can also work with your team at specified milestones conducting **project reviews** to ensure the right quality level before moving to the next milestone.
